## Lighting manufacturing companies in usa

As the global LED market continues to grow, the world's top LED lighting manufacturers still dominate the market. In recent years, LED lights have been rapidly replaced by incandescent and fluorescent light sources, LEDs can produce light by consuming much less energy and due to less environmental damage. LED bulbs and lamps also have a longer lifetime than incandescent lights. Also, the efficiency of LED lighting fixtures is not depending on shape and size, as opposed to fluorescent lights. LEDs are small and robust, making them perfect for applications such as aviation lighting, advertising, general lighting, automotive headlights, traffic signals and medical devices. LEDs are also increasingly used for lighting architecture and artworks. The global LED market is expected to grow by about \$24 billion by 2022. To learn more about the market size of the latest LED lighting, top LED lighting manufacturers, and factors driving market growth in controlling the global LED Market 2020-2024 Technavio industry report, or download the free Global LED Market Report Sample now! LED Lighting Market The production and installation costs of OutlookLED lighting fixtures are decreasing. This does not result in higher uping of LED lighting systems by end-user industries. The world's top LED lighting companies invest in the research and development of LED manufacturing technologies that will allow them to produce high-efficiency and environmentally friendly products for their customers. In North America only, the LED lighting market is expected to grow gradually to close to \$7 billion by 2022. Market 2018 and 2022. Technavio's LED Lighting Market provides an in-depth analysis of the competitive landscape and market share of LED lighting companies in North America, which is expected to grow by a CAGR of about 12% between North America 2018-2022 market research report. Technavio is closely monitoring the latest LED lighting market trends to build an in-depth portfolio of LED market research reports. These reports help our customers identify opportunities in the market and develop effective strategies for optimizing market locations. Take a look at Technavio's LED Lighting Market Research Library and download the free sample report today. World's 10 Largest LED Lighting Manufacturers and Their Key LED ProductsAAcuity BrandsFounded: 2001Headquarters: Atlanta, GA, United StatesWebsus: www.acuitybrands.comRevenue: USD 3.29 billion (FY 2016)Acuity Brands is one of the world's leading LED lighting manufacturers, specializing in lighting, controls, and daylight systems. It offers a wide range of indoor and outdoor lighting solutions suitable for all applications and environment. The company's diverse portfolio of lighting products, education, commercial offices, healthcare, hospitality, government, industrial, housing, transportation, highways, bridges, tunnels, sewers and dams. The company focuses on developing new technologically advanced products such as solid-state LED lighting integrated with digital controls, organic LED lighting (OLED) and a diversity of LED-based lamps. Digital lighting systems manufactured by this company are equipped with etdoLED drive technology that provides superior system performance, innovative features and a wide range of power levels. Key Products: Aculux, Juno, Holophane, Indy, Hydrel, and PeerlessCreeFounded: 1987Centre: North Carolina, United StatesWebsion: www.cree.comIns: USD 1.47 billion (FY 2017)Cree is one of the largest LED lighting companies producing lighting grade LED and semiconductor products for power and radio frequency (RF) applications. Cree LED chips combine InGaN materials with proprietary SiC surfaces to provide superior performance and high durability for semiconductor devices and high-density LEDs that work at high temperatures and voltages. Cree LEDs are used in various applications such as interior and exterior general lighting, smart lighting, EVs/HEVs and electronic markings. Cree uses the SmartCast Intelligence Platform, a lighting control system that combines intelligent lighting with the Internet of Things (IoT) and innovative applications and provides businesses with sensor-rich lighting networks and data-driven insights. Key Products: C-Lite series, KR Series and ESA SeriesEatonFounded: 1911Centre: Dublin, Republic of IrelandWeb Site: www.eaton.comEaton lighting division offers a wide range of innovative and reliable interior and exterior lighting and control solutions. These lighting systems are used in applications such as commercial, industrial, retail, corporate, useful and residential applications. The company utilizes state-of-the-art technology to help businesses and communities improve efficiency, reduce costs and protect the environment. Company, ConnectWorks Connected Lighting System, DALI Lighting Control, Halo Home, iLumin Plus, LumaWatt Pro Wireless Connected Lighting System, and WaveLinx Wireless Connected Lighting System.Key Products: All-Pro Outdoor, Ametrix, CoreLite, Halo Commercial, Invue, and Neo-RayGE LightingFounded: 1911Headquarters: East Cleveland, Ohio, USAWebsite: www.gelighting.comRevenue: USD 1.99 billion (FY 2017)As one of the world's largest LED lighting manufacturers, General Electric's lighting division specializes in creating the best lighting solutions for homes. GE LED bulbs are known for their high energy savings and durability. A line of smart lighting products with C functions, features and Amazon Alexa voice control by GE. These smart lamps have features such as visual timers and sleep/wake cycle support and can be controlled by sound. Key Products: GE LED, GE HD +, GE hd relax, GE spacious HD, by C-Sleep and C Sol by GEPPhilips Lighting / SignifyFounded: 1891Centre: Eindhoven, NetherlandsWebsus: www.lighting.philips.comRece income: USD 8.1 billion (FY 2017)Philips has long been one of the world's best-known LED lighting manufacturers. Philips Lighting has been officially known as Signify since May 2018. However, it can use the Philips brand for its products by 2030. When Philips was founded in 1891, its plan was to provide cost-effective and reliable electric incandescent bulbs for everyone. Philips Lighting has been innovate to make people's lives more comfortable and productive for more than 120 years by offering high-quality lighting solutions for public spaces, professional spaces and homes. Philips lighting systems benefit the customer and the environment by seamlessly connecting with other digital devices using a combination of patented technologies. Philips Hue is a wireless lighting system that can control lights and create the right ambience at any time. This connected lighting system works with a number of different smart devices and can be connected with Amazon Echo, Google Home and Apple HomeKit.Key Products: Philips Hue, Philips LED Bulbs, Philips LED Tubes, and Philips LED SpotsPhilips' market share in the global LED Lighting marketOsramFounded: 1919Center: Munich, GermanyWebsite: www.osram.comIndustry: USD 4.9 billion (FY 2017)Osram Opto semiconductors is a subsidiary of Osram Osram Osram and specializes in the design and production of opto-semiconductors including LEDs. The company uses extensive technological knowledge to produce high quality products in the field of LED lighting, visualization and sensor technology. Osram LED is used in various applications such as indoor, outdoor, horticulture and human-centered lighting. Osram's human-centered lighting products help create lighting that copies natural daylight, thereby improving one's performance, comfort, health and well-being. The company also offers digital lighting systems that help customers deliver smart building and IoT projects. Key Products: Osconiq, Duris, Soleriq, Firefly, Synios and TopledNichia CorporationFounded: 1956Headquarters: Anan, JapanWebsite: www.nichia.comRevenue: USD 2.42 billion (FY 2016)Nichia is one of the world's top LED lighting manufacturers in terms of revenue from the sale of LED packages. Displays design and produce LEDs for LCD backlighting, automotive and general lighting. The world's first white LED was developed by this company by combining yellow phosphorus and blue LEDs. The company also produces a UV-LED used in applications requiring strict quality controls such as high precision curing, ink curing, invoice control, fake detection and lithography. Nichia LED packages are characterized by high efficiency, flexible cluster configurations and high light flux density. Nichia standard LED uniform spatial dispersion, excellent temperature stability and lighting repeatability and developed in collaboration with Advanced Industrial Science and Technology (AIST). Key Products: 585 Series, 757G-V3 Series, High Power series, COB Series, 3 in 1 Series and Optisolis.Seoul SemiconductorMel: 1992Center: Ansan, South KoreaWebsus: www.seoulsemicon.comInduce: USD 1.04 billion (FY 2017)Seoul Semiconductor EPI has more than 12,000 patents for LED lighting, including packaging, optics, modules. The company has invested in research and development to develop un packaged LED technology for the past two decades, WICOP, and AC driven LED technology, Acrich. The company's SunLike LED technology reproduces sunlight by changing the blue LED light source with a purple light LED chip. The company works to provide safe and environmentally friendly products to its customers by strictly examining and managing all parts and raw materials used in its products. Key Products: WICOP Series, 4040 Series, Acrich Modules, SunLike, Filament COB, and DC ModulesLED to learn about the major drivers and trends responsible for the growth of the industry, Global LED Market 2020-2024Zumtobel GroupFounded: 1950Headquarters: Dornbirn, AustriaWebsite: www.zumtobel.comRevenue: USD 1.51 billion USD (FY 2017)Ask for a FREE sample from our market research report producing professional indoor and outdoor products from The Zumtobel Group, lighting management systems and offices and communications Lighting components for various applications, including education and science, presentation and retail, hotel and wellness, arts and culture, industry and engineering, and outdoor and architectural. Zumtobel's range of AMPHIBIA lighting products is suitable for industrial applications where dust, deer, chemicals and mechanical voltage pose a constant threat to lighting quality. The OPTOS LED range combines recessed light source and carefully designed lens optics to provide discreet and high-quality aesthetic architectural lighting. Key Products: Arcos, Diamo, Intro, Panos, Amphibian and OptosEverlight ElectronicsFounded: 1983Headquarters: New Taipei City, TaiwanWebsite: www.everlight.com Everlight, known as one of the world's largest LED lighting manufacturers, offers a wide range of products including high-powered LEDs, SMD LEDs, lamps, lighting components, LED lighting modules, digital images, opto-couplers and infrared components for a variety of applications. Street lighting products produced by this company have high brightness and over 80 CRI, thus creating a comfortable environment. Everlight LED bulbs, tubes and candles act as versatile lighting sources and are mostly used in internal applications. The company's horticultural LEDs can replicate sunlight and fine-tune the customer's specific needs. Key Products: COB Series, Horticultural LED, UVA Series, Flash LED, and LED LampsRead more: ChinaLED Lighting Industry Led Lighting Market Trends: The Future of Led Lighting Manufacturers Since the establishment of smart homes, there has been a growing demand for smart LED lighting systems that can be connected with other electronic devices and controlled remotely. LED lighting companies are integrating IoT with LED lighting solutions to collect data and record motion patterns. By analyzing this data, lighting systems can automatically turn off or reduce their density, resulting in high power savings. Users can also adjust lighting charts and control the brightness and color temperature of LED lights with the help of these intelligent systems. Many of the world's leading LED manufacturing companies also offer human-centered lighting solutions. Research has shown that our energy levels, mood and alertness or sleep state are controlled by a circadian rhythm organized by the brain based on light signals from the environment. Human-centered lighting adapts light color and intensity throughout the day to create a circadian-friendly lighting array, improve one's mood and improve productivity.
